vertebra⁰³

Vertebra-03 leads to correct seating,
and fits any scene of workstyle.

Easy lifting

While sitting, rotate the dial on the tip of your right elbow to adjust the seat height to the diagonal.

Reducing Thigh Pressure

When leaning forward, the front edge of the seat flexes up to 10 degrees, reducing thigh pressure.

Locking

Leaning on the back tilts at the two fulcrums of the elbow and back. Tilt up to 25 degrees in total without any operation.

3D seat surface

The shape of the seating surface that does not feel like pushing bottom. The three-dimensional shape guides the person to sit correctly.

Seat slides up to 30mm

The seat surface slides forward up to 30 mm. It is stable even when tilted backwards and can secure a rear space even in a narrow space.

1. Forward Tilt

When leaning forward, the front edge of the seat flexes up to 10 degrees, reducing thigh pressure.

2. Upright

In the normal position, the backrest always supports the abdomen, supporting short-time work.

3. Backward Tilt

When you lean on your back, the seat surface slides forward and tilts up to 10 degrees with your elbow as the fulcrum. Suitable for working and talking on laptop pc.

4. Stretch

With the backrest attachment part as a fulcrum, it can be tilted an additional 15 degrees to allow stretching around the abdomen.
